FLOAT & THERMOSTATIC STEAM TRAP

INSTALLATION INSTRUCTIONS

INSTRUCTION PART NO. 2217700 REVISION 0

INSTALLATION

1. Before installing the trap, blow out piping thoroughly to remove loose scale and dirt. Use pipe dope or teflon tape sparingly when attaching the trap to the pipe. Observe the pressure limitation shown on the trap label.
2. Install the trap drainer in a horizontal pipeline below the equipment being drained in a location easily accessible for maintenance and inspection. Be certain the 2" and 2 1/2" traps are supported under the trap body.
3. Install a drip pocket to keep dirt away from the trap.
4. Discharge piping should be amply sized to avoid excessive back pressures.
5. To provide for easy maintenance and service, install a block valve on each side of the trap and install a strainer ahead of the inlet connection.
6. All valves should be full ported to achieve the rated capacity of the trap.
7. If discharge piping is to be elevated, be certain that the available differential pressure is adequate to permit proper drainage. Remember, two feet of lift equals approximately one psig.
